Thank you for every piece of information. A: See: I think there's a planned date of April 1st 2018. Q: Rails where association returns nil Hi I am having issues with this associations. My teacher said I needed to include a join table in my model. I am new to rails so I don't know how I can do this, I am using rails 4.2.0. I have this: class User :attendances end class Attendance :attendances_user_info has_many :attendances, :through => :attendances_user_info I get this error when I am trying to get the attendances of a user: NoMethodError in SessionsController#create undefined method `attendance_user_info_attendances_user_info_id_null' for nil:NilClass which I think is the where condition in my model, but I don't really know what to do. The error is pretty self-explanatory; you're trying to get all attendances from user where user_info_id is nil. I would suggest, for this specific case, that you just don't do that. Create an empty default value for user_info_id (e.g. "default") and then use that in your query. So, replace has_many :attendances_user_info, :through => :attendances with has_many :attendances_user_info, :through => :attendances, :source => :user, :conditions => 'user_info_id = #{attendance.user.user_info_id}' 82157476af
